PERSONAL PROJECTS

- Show Time** [Link](#)
Developed a Django-based clone of BookMyShow, a popular online ticketing platform, providing users with a seamless and user-friendly experience to book tickets for movies. Incorporated features such as payment gateway, and QR identification of tickets for easy and efficient entry at the event venues.
– Tools & technologies used: Django , Bootstrap , HTML5 , CSS
- Skills Sync** [Link](#)
It is a resume-based job recommender project that assesses the percentage of getting a job based on the skills listed in a resume. This innovative project utilizes web scraping techniques to collect real-time job listings from diverse platforms and industries. It streamlines the job search process and empowers by analyzing the job descriptions and requirements, it intelligently matches a candidate's skills and qualifications with the specific needs of job listings.
– Tools & technologies used: Python, nlp
- Synergy** [Link](#)
I was part of a collaborative team at the Tri-NIT hackathon, where we developed a farmer-focused project. Our platform used data analytics to offer location-based crop recommendations, yield predictions, disease detection, and fertilizer suggestions through exploratory data analysis on the datasets from ICRISAT to provide valuable insights to farmers.
– Tools & technologies used: Tensorflow, Scikit-learn, Flask
